Transform Datasheet

In today's tough business environment wasted time through poor data management means lost productivity. TransForm can revolutionise your data capture, inspection and verification to simultaneously meet regulatory and operational requirements, whatever your business, wherever you are.

Automatic calculations, user configurable selection lists, numeric validation limits and the ability to scan barcodes all combine to guarantee fast, accurate data collection.

TransForm is scalable from a single installation to a global solution that ensures consistency of process and shared information across the whole organisation, reducing reporting time, saving costs and fostering the one business vision. You can access crucial business data 24 hours a day from any location via a secure internet browser with customised views delivering key information to support your role and decision making.

TransForm users around the world save vital time and improve staff productivity to generate 40% - 70% efficiencies, with payback achieved from 6 months.

This single package provides ALL of your data capture and management requirements, ensuring your data is accurate, consistent and easily retrievable. TransForm is a flexible system capable of delivering both current and future needs without the risk and commitment associated with custom development.

Features & Benefits

Cost Effective – Consistent company-wide procedures deliver operational efficiencies which reduce cost and increase productivity. Electronic archive eliminates paper storage costs and reduces search time. As well as improving communication channels, electronic data delivery reduces printing, paper and postage costs and reduces environmental impact.

Accessible – TransForm provides instant data access and retrieval via PCs and a range of hand held devices/PDAs and will also interface with browsers, equipment, networked devices and third party databases. The reporting function integrates with Windows applications to provide the information you need when you need it, wherever you are.

Flexible - The ability to design, build and change your own templates means you can change your data collection activities at no extra cost, with minimal effort and without affecting existing data. Users can generate field structures such as auto complete, include calculations and links, create schedules and manage barcodes and exceptions.

Accurate – TransForm eliminates illegible handwriting and the need for data re-entry, and provides an audit trail where users are required to document reasons for change to existing data. The system can also provide an asset tracking service. TransForm can interface with equipment with a comms port, enabling automatic readings.

Proactive – data analysis and exception reporting enables you to spot trends and address issues before they arise. Instant validation allows users to take immediate action to resolve problems. Scheduling regular maintenance inspections minimises and can pre-empt the risk of equipment breakdown, increasing production and profitability.

Measurable – allows users to create bespoke management, performance and data analysis reports, and can deliver employee and customer satisfaction surveys. TransForm also assists with contractor performance management.
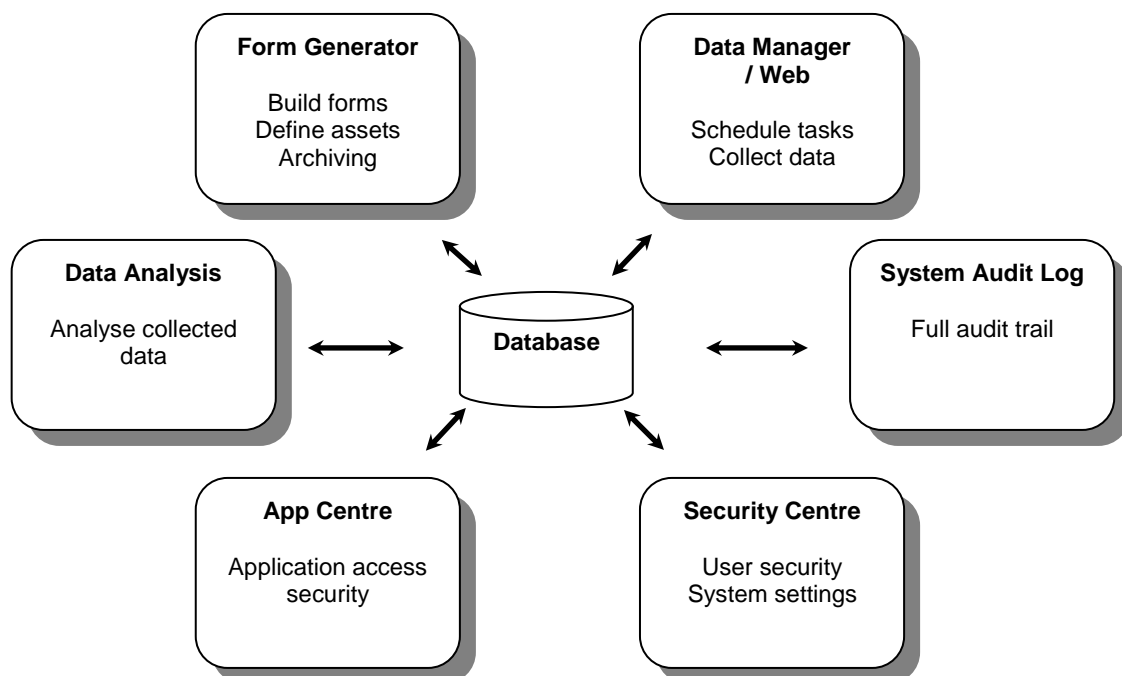

Scaleable – from a single licence to multi-user network to the web, TransForm allows you to upgrade as required.

Secure – access levels can be set for individual projects, applications and users.

Compliant – meeting regulatory and operational requirements, providing an audit trail and detailed inspection history.

How does TransForm work?

TransForm consists of five modules, the main two being FormGen and Data Manager, with Data Analysis, Security Centre and App Centre completing the package.

FormGen holds the tools that allow your nominated systems administrator to configure your TransForm system, tools which allow the user to:

- **Create bespoke new forms and assets**
- **Update existing forms and assets**
- **Link information between forms and assets to auto complete fields**
- **Add simple or complex calculations to forms**
- **Manage selection lists**
- **Link files on your network to forms**
- **Test forms before general release**

Data Manager is the module that most users will access on a regular basis and allows them to:
- **Schedule and complete forms**
- **Create file structures to reflect individual site layout**
- **Download forms to handhelds for mobile data capture**
- **Generate reports**
- **Manage exceptions**
- **Add shortcuts to files on your network, eg user manuals, certificates, images etc against equipment assets**
- **View audit logs**
- **Configure devices for direct data feed**
- **Manage barcodes**

Data Analysis is a powerful tool which allows users to collate and analyse data quickly and easily. With Data Analysis, users can:
- **Create and save data analysis reports**
- **Perform data trending and performance monitoring**
- **Create bar charts and pie charts**
- **Export graphs and data analysis reports**

Security Centre provides your nominated system administrator with security tools which allows users to:
- **Define user roles, including access rights and security rights**
- **Set user profiles, including assigning program privileges**
- **Manage user groups and user settings**

App Centre is a useful tool which allows your system administrator to:
- **Manage and set up new applications**
- **Define user access by application**
- **Add user roles and groups by application**
